

TRANSP - Server Transport Protocol

This Natural profile parameter is for UNIX/OpenVMS and Windows platforms only.

Note for mainframes:

Use the keyword parameter TRANSP of the NTRPC macro for static specification, or the subparameter with the same name of the profile parameter RPC.

It determines which server transport protocol is used. If ACI is used, you can additionally specify the transport method.

TRANSP is specified on the server side only.

Possible settings	ACI	ACI is used. The transport method is defined by the EntireX Broker.
	CSCI	CSCI is used. (OpenVMS only).
	ACI,TCP	ACI is used with TCP/IP.
	ACI,NET	ACI is used with Entire Net-work, i.e. using the Adabas protocol.
	ACI,TCP-NET	Trying to use ACI with TCP. If not available, ACI is used with NET.
	ACI,NET-TCP	Trying to use ACI with NET. If not available, ACI is used with TCP.
Default setting	ACI	
Dynamic specification	YES	
Specification within session	NO	

Note when using the Natural RPC Version 5.1:

The use of TRANSP is no longer required as you may now specify the full node name with SRVNODE. It is still supported for compatibility reasons.

For further information see the Natural Remote Procedure Call documentation.
